

LINUX INSTALLATION AND BASICS FOR IVEWARE 0.2

This document describes the steps needed to run IVEware under LINUX

1. Download `iveware.tar.gz` and place it in your home directory use File Browser (or similar file navigation dialog).
2. Decompress `iveware.tar.gz` by right clicking on it and select "Extract here". Alternatively, from a terminal window the file can be decompressed by typing:

```
gunzip iveware.tar.gz
```

```
tar -xvf iveware.tar
```

3. To run the application double click on the `iveware.app` icon.

The user can view and manage datasets under the `data` folder, which contains `datasets`, `myoutdir`, and `output` directories.

The directories `myoutdir` and `output`, in particular, can be used to monitor system processing of time consuming scripts.

For further details on how to use IVEware the user can refer to the IVEware Version 0.2 User Guide.
