LINUX INSTALLATION AND BASICS FOR SRCWARE 0.2

This document describes the steps needed to run SRCware under LINUX

1. Download srcware.tar.gz and place it in your home directory use File Browser (or similar file navigation dialog).

2. Decompress srcware.tar.gz by right clicking on it and select "Extract here". Alternatively, from a terminal window the file can be decompressed by typing:

gunzip srcware.tar.gz

tar –xvf srcware.tar

3. To run the application double click on the srcware.app icon.

The user can view and manage datasets under the data folder, which contains datasets, myoutdir, and output directories.

The directories myoutdir and output, in particular, can be used to monitor system processing of time consuming scripts.

For further details on how to use SRCware the user can refer to the SRCware Version 0.2 User Guide.
